- FOREWORD -

The Bibliographic databases are the component of Bibliographic information system which maintain data about collection of documents or publications. They typically have records composed of attributes or data elements, such as authorship, title, key words, subjects etc. Since the data collected in bibliographic, by and large, contain potential information about documents, these are correctly called as "Information Storage and Retrieval System". The contents or data recorded in a bibliographic record in one which is carefully selected, prepared, represented or structured as well as indexed with the expectation of eventual retrieval and use on the basis of the well defined guidelines or techniques.

The "Desertification, Soil Conservation and Environment" are among the major mandates of the institute's work since 1962. Over the years, a large amount of data has been collected for the wider use of arid zone scientists in general and institute's researchers in particular. Looking to the imperative need of such data, the Department of Environment, (DOE), Govt. of India, approved to establish an Environmental Information System (ENVIS) Centre on "Desertification and Soil Conservation" at Dr. Raheja Library, CAZRI, in 1991.

Shri Tirth Das, Shri D.V. Kothari and Dr. D.C. Ojha, have, thus tried to put forth these collected data in the form of a bibliography in a systematic order. It is hoped that this classified bibliography would be of interest to arid zone workers. I sincerely compliment Shri Tirth Das, Kothari and Dr. Ojha for their initiative and efforts for this excellent compilation. It is also believed that the example set by these compilers will encourage others to take up similar task.

A.S. FARODA
DIRECTOR

DATE:

- PREFACE -

As a significant achievement of the institute library, the DOE (Department of Environmental) approved to establish a ENVIS (Environmental Information System) centre on "Desertification and Soil Conservation", in 1991. Since it is a mandatory for the centre to create data-base and to bring out bibliographies and indexes on the relevant subjects, an attempt has been made to compile a bibliography on Desertification, Environment and Soil Conservation of the data available in Dr. Raheja Library. The institute is collecting, compiling and disseminating the information on Desertification and Arid Zone since 1962. With time, the scope of the subject has become very wide and the published information is available in books, journals, reports, reprints, atlases etc. On account of the information explosion in the field of science and technology, it has become almost impossible now for a research worker to keep track of the latest developments in their fields of specialisation without the aid of suitable bibliographical services. These services have, thus, become sine qua non in any dissemination system.

While attending to reference queries received at this centre from various part of the world specially from the SAARC countries, we often felt the need of for a comprehensive bibliography covering a period of time. The bibliography on Desertification is an attempt at meeting this need. The bibliography has covered more than 635 references concerning to Arid and Semi Arid zones, Desert Ecology, Environment, Forestry, Soil Conservation etc. In the end to facilitate the users an author index referring the entry number of the bibliography has been provided.

We would consider our labour amply rewarded if this compilation comes to the aid of Desert Environment scientists, planner and policy makers in their search for published information in their respective fields.

TIRTH DAS
D.V. KOTHARI
